

# Shiny Seniority

## Project Overview

**Shiny Seniority** is an application solution that connects the society at large with the elderlies living in nursing homes or community hospitals. The solution enables family members to be in touch with their elderlies. It also enables the public to interact with the old folks by creating meaningful activities with rewards for the seniors to participate in and a platform to sign up for volunteering events. It uses Blockchain to store these records as to prove the authenticity of the event and cryptocurrency as a wallet and reward system.
